

ABSTRACT OF THE DISCLOSURE

A mobile station, a communication system, and a transmission method are provided. A control unit  
5 determines a transmission power limit in accordance with a shape of a mobile station. That is, when the mobile station is not folded, thus presenting a shape that may be considered as allowing the user to hold it in hand to bring the speaker close to the ear for voice communication,  
10 the transmission power limit will be set to the one for voice communication. On the other hand, when the mobile station is folded, presenting a shape from which moving image communication may be anticipated, the transmission power limit will be set to the one for moving image  
15 communication.
